

Chemistry Review

Name Parker

Answer the following questions.

1. What is the process that turns a liquid into a gas?

Evaporation

2. What is the positively charged particle in an atom?

Proton

3. What is matter made of only one type of atom?

Element

4. What is the atomic number of an element?

the number of protons

5. What is the process that turns a liquid into a solid?

freezing

6. Which states of matter has a definite volume but no definite shape, and particles apart moving freely?

liquid

7. What is the amount of matter in an object?

mass

8. How are the horizontal rows in the periodic table organized?

increasing atomic number

9. What is the negatively charged particle in an atom?

Neutron

10. What is the mass per volume of an object?

density

11. Which state of matter has a definite shape and volume, and particles that are tightly packed moving very slow?

Solid

12. What is the process that turns a solid into a liquid?

melting

13. Which particle in an atom is neutral?

Neutrons

14. What is all the mass in the nucleus of an atom called?

atomic mass

15. What is two or more elements joined together to make a new substance?

compound

16. What is the smallest part of matter?

atom

17. Which state of matter has no definite shape or volume and particles that are very far apart moving very fast?

gas

18. What is the process that turns a gas into a liquid?

condensation

19. How are the vertical columns in the periodic table organized?

by similarities

20. What is the amount of space an object takes up?

volume

21. What is the smallest part of a compound?

molecule

22. What is the process that turns a solid into a gas?

sublimation

Decide if the following are chemical changes or physical changes. Write **C** on the line if it's a chemical change and **P** on the line if it's a physical change.

C burning

P melting

C rusting

P freezing

C tarnishing

P cutting into pieces

P changing shape or form

C changing into a new substance

Use your periodic table of elements to answer the following questions.

21. Which element has an atomic number of 82?

Lead

22. Which element has an atomic mass of 119?

Tin

23. Which element has the symbol Hg?

Mercury

24. What is the symbol for platinum?

Pt

25. Which element has more protons than nickel (Ni) but less protons than zinc (Zn)?

Copper

26. Which element has half the atomic number of iron (Fe)?

Aluminum

27. Which element has double the atomic mass of carbon (C)?

Magnesium

28. Which element has triple the amount of protons as neon (Ne)?

Zinc

29. Which element has an atomic number equal to the sum of the atomic numbers of sodium (Na) and krypton (Kr)?

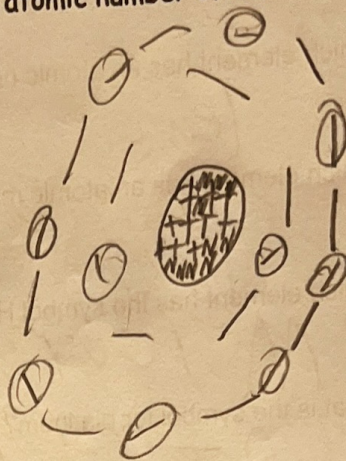

Silver

30. Which element has an atomic mass equal to the atomic mass of potassium (K) minus the atomic mass of sulfur (S)?

Lithium

31. Draw an atom of neon (Ne), which has an atomic number of 10 and an atomic mass of 20.

Ne - Neon
atomic # = 10
atomic mass = 20
 $+p = 10$
 $-e = 10$
 $N = 10$

32. Complete the following diagram on changing states of matter by writing the process on the line.
